

GO DEVELOPER

ABOUT THE COMPANY

KEEN EYE is a health tech company, building machine learning technology for translational and clinical research, with a particular focus and a 'keen expertise' on imaging data. Thanks to its technology, KEEN EYE allows doctors and biologists to reproduce and extend their visual expertise, notably by identifying signals with high predictive value that are yet difficult to detect by eye. They save valuable time in day-to-day decision-making, whether it is to diagnose, screen disease, or evaluate the effectiveness of a drug, in a more precise and standardized way. KEEN EYE's clients and partners are CROs, biotech / pharma, hospitals and life science device manufacturers.

SUMMARY

Directly reporting to the CTO, you will work on the design and implementation of our Go backend and become a vital part of our engineering team by showing your passion for robust and scalable distributed backend services, in relation to the integration, testing and continuous deployment of our platform. Your contribution will be essential to the realisation of a robust, efficient and secure software platform.

On a daily basis, you will work in a motivating, dynamic and fast growing environment with a diverse and enthusiastic team and use Open Source technologies.

ESSENTIAL DUTIES AND RESPONSIBILITIES

- Write code that your co-workers appreciate for its readability, efficiency and elegance
- Work on a growing set of backend services that bring a complete workflow of image analysis to our customers
- Previewing and debugging
- Build toward an efficient micro services distributed architecture
- Be responsible for delivering features and APIs (JSON/RPC) on the backend service side in close cooperation with our Frontend and R&D teams
- Maintain and improve existing automatic deployment tools written in Go

EDUCATION AND EXPERIENCE REQUIRED

Master Degree in Computer Science or equivalent

Minimum of 2 years of programming experience required

You have experience in developing and maintaining fast, scalable and well-documented APIs.

You know the current trends in architecture and web services

Proficiency using DVCS like Git: commits, branches, merges, diff

Comfortable working with pull requests and code merges in a team

KNOWLEDGE AND SKILLS

Having developed backend services using Go is appreciated

Experience in other languages such as C/C++ or Python

Autonomous, great communication skills, sense of responsibility, ability to innovate, Team Spirit

Bias to Action, Organized

Fluent English

POSITION INFORMATION

- Permanent contract, full-time
- Comprehensive compensation and benefits package
- Location: Paris center
- Remote work possible
- Date: ASAP
